

Setting Up Java Development Environment

林苡晴 110356019@nccu.edu.tw

蔣其叡 111356024@nccu.edu.tw

Steps

1. Install JRE (JAVA RUNTIME ENVIRONMENT):
<https://www.java.com/en/download/>
2. Install JDK (JAVA SDK):
<https://www.oracle.com/java/technologies/javase/javase-jdk8-downloads.html>
3. Set Environment Variables:
JAVA_HOME: jdk root
CLASSPATH: jdk root/lib
Path: jdk root/bin
4. Install Eclipse IDE:
<http://www.eclipse.org/downloads/>
5. Install Git
<https://git-scm.com/>

Install JRE(Java Runtime Environment)

- <https://www.java.com/en/download/>
- After download, keep clicking "Next" to install.

Set Environment Variables

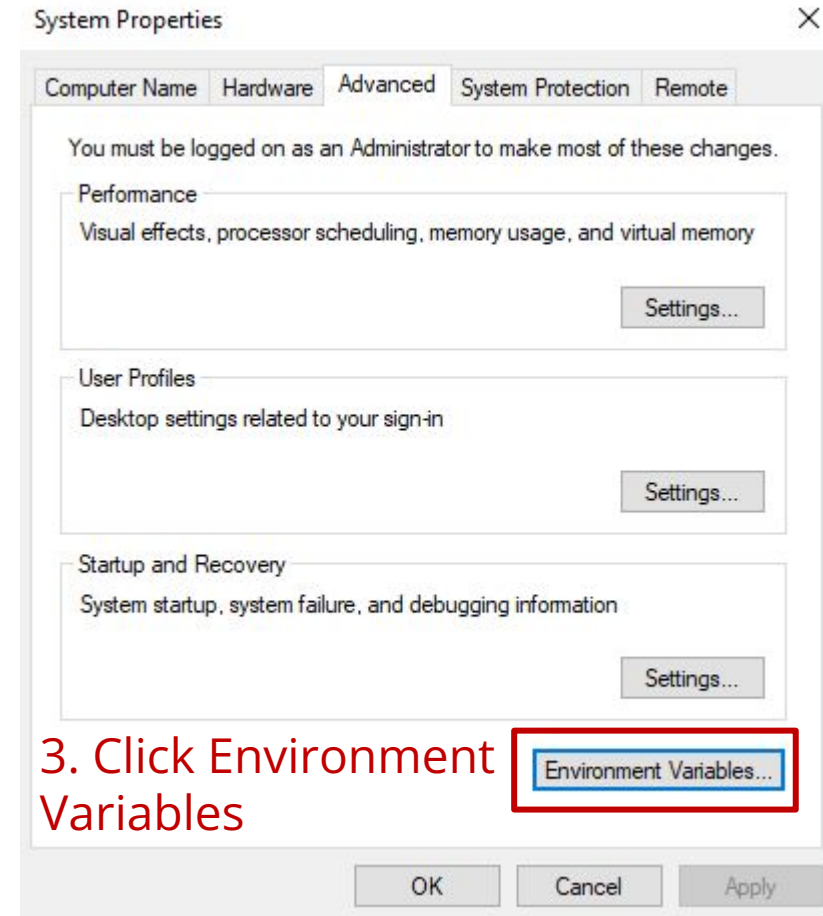

- Notice: You don't need to set environment variables on MAC OS.
- Environment Variables are the common variables in OS. Therefore, to let the OS know where we install JDK and JRE, we will set the following three environment variables:
 1. JAVA_HOME:
Location of the installation directory of JAVA
 2. CLASSPATH:
Location of the library of JAVA developer tool
 3. PATH:
Add JAVA-related commands to the system default search location

Set Environment Variables

1. Settings -> System -> About

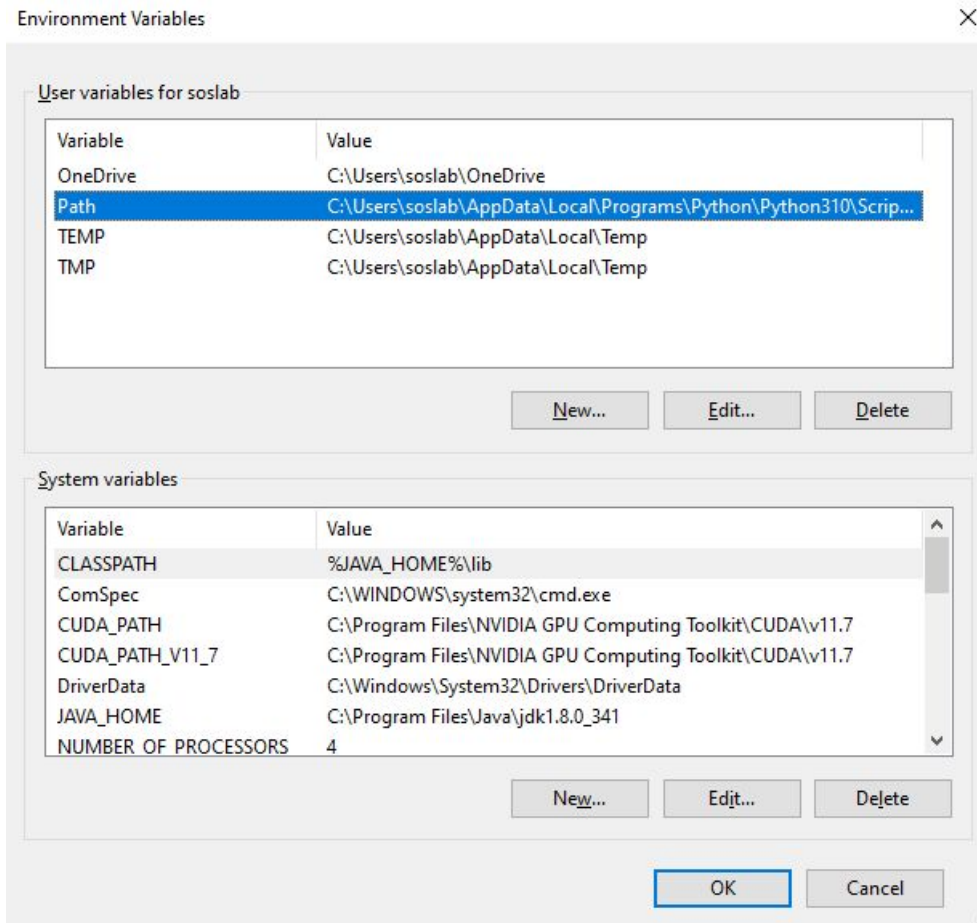

2. Click Advanced system settings

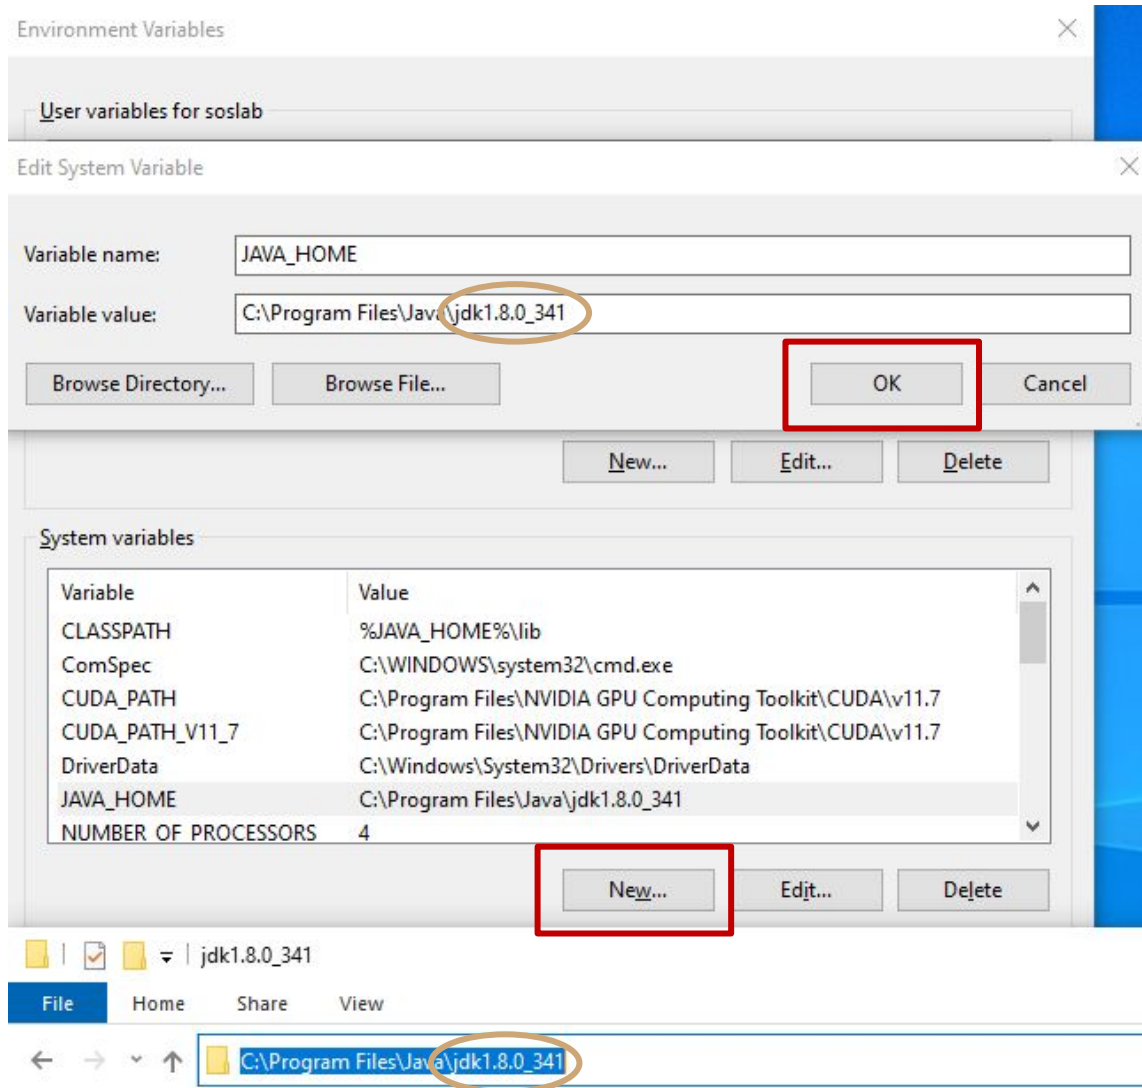

3. Click Environment Variables

Set Environment Variables

- If we set environment variables in the upper section (User variables for XXX), it means our setting only works when XXX login Windows.
- If we set environment variables on bottom section (System variables), it works when any user login.
- Recommend that you use the bottom (System variables) to set environment variables.

Set Environment Variables JAVA_HOME

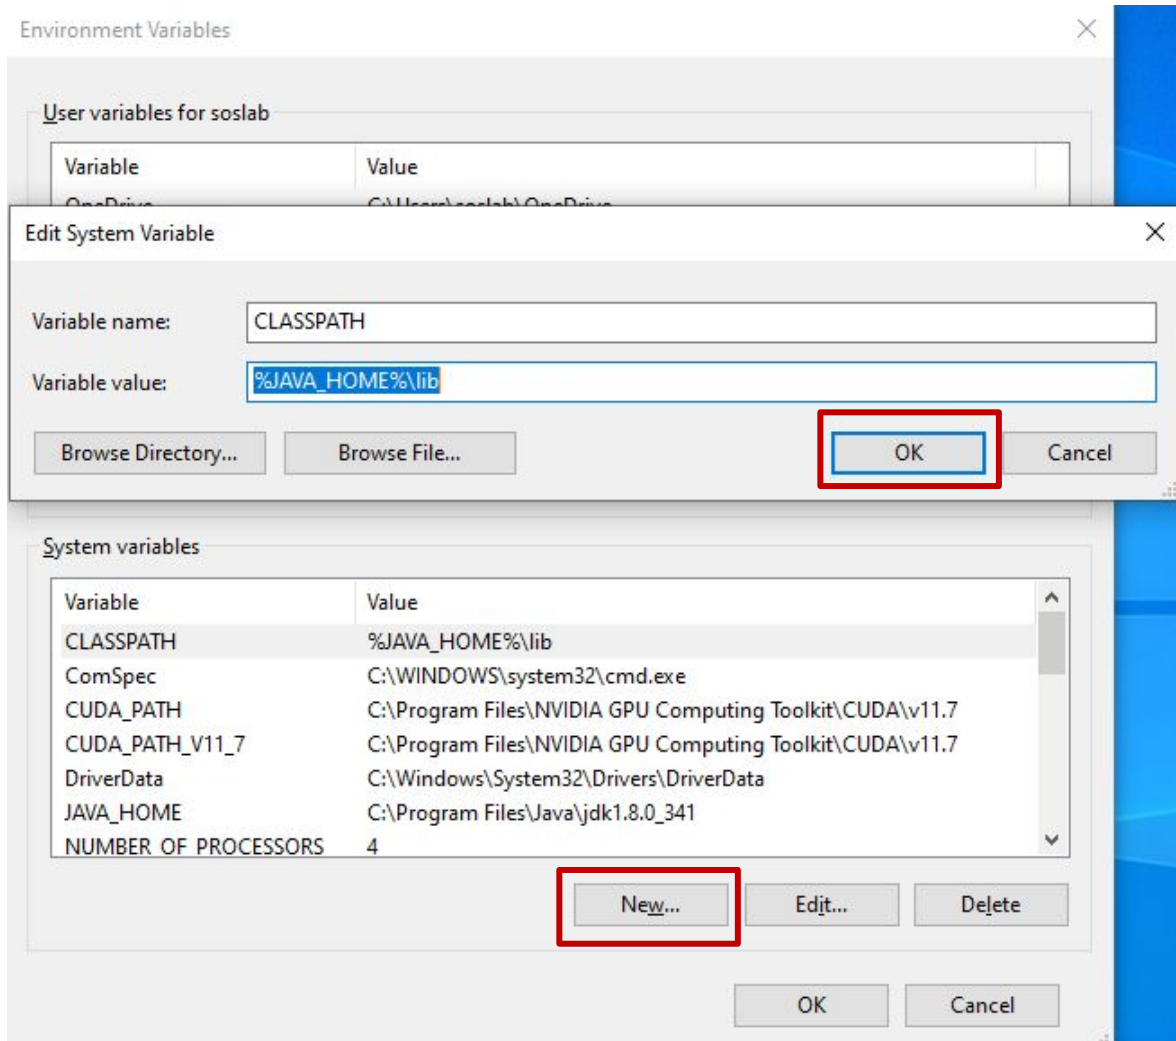

1. Click "New"
 - Variable name: JAVA_HOME
 - Variable value: installation directory of JDK

X64 windows usually is:
C:\ProgramFiles\Java\jdkXXXXXXXX

X86 windows usually is:
C:\Program Files(x86)\Java\jdkXXXXXXXX

 - The red part depends on the version; please check whether the directory exists and set the environment variables.
2. Click "OK" to save.

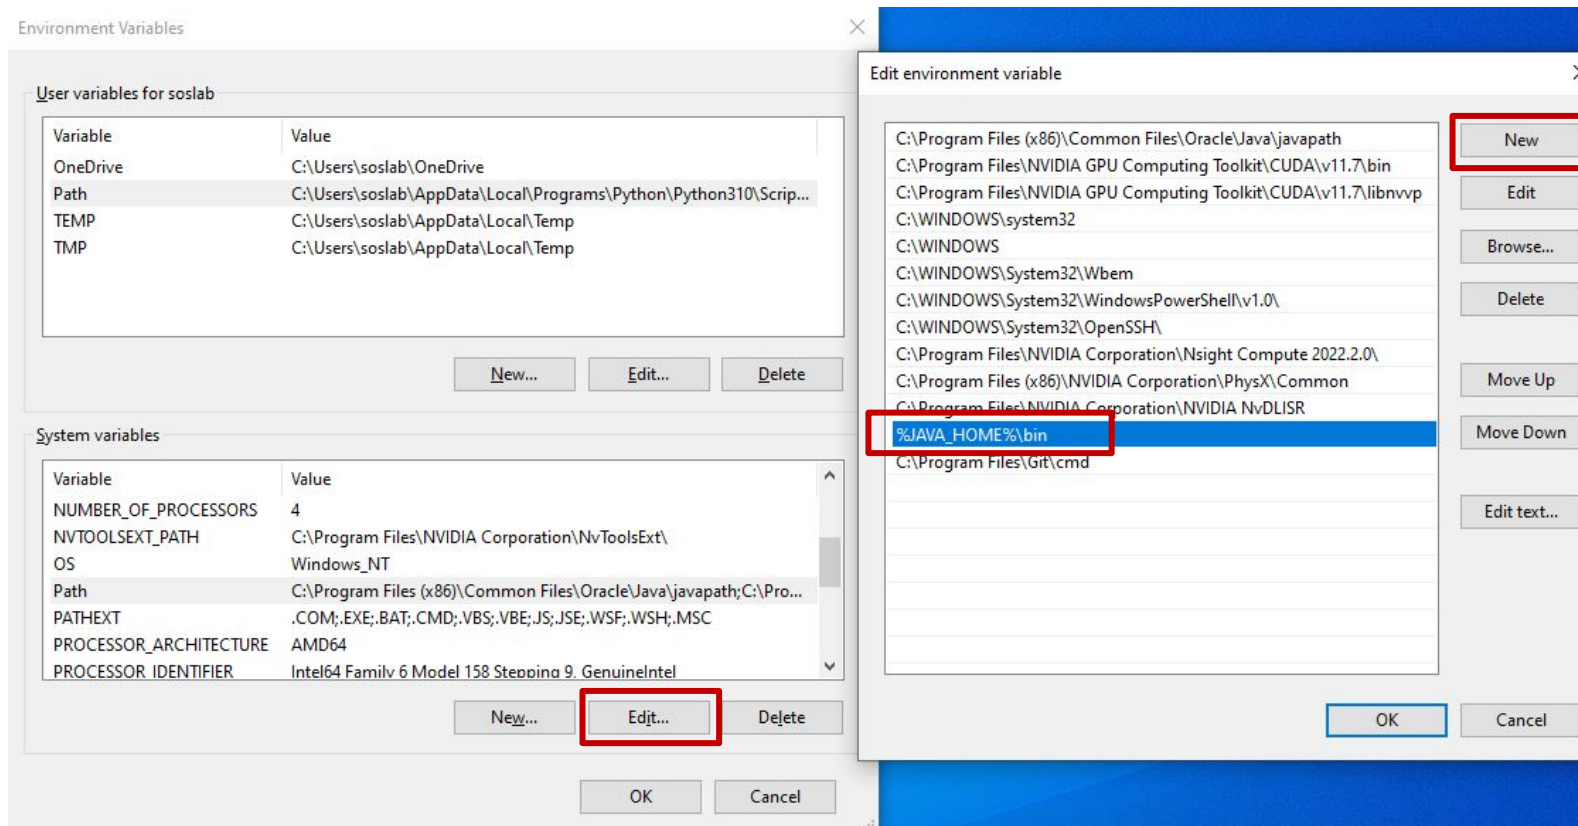

Set Environment Variables CLASSPATH

1. Click "New"
 - Variable name: CLASSPATH
 - Variable value: **%JAVA_HOME%\lib**
installation directory of JDK
 - **%JAVA_HOME%** is the path of JAVA_HOME
 - If you alter the Java JDK version in the future, only need to change the environment variables of JAVA_HOME, and don't need to change others.
2. Click "OK" to save.

Set Environment Variables PATH

- PATH variable usually has other values, so instead of adding this, we need to find the “PATH” variable in the list and **click “Edit”**.
- PATH contains lots of paths; **click “New”** and then input **%JAVA_HOME%\bin**
- **%JAVA_HOME%** is the path of JAVA_HOME

Install Eclipse IDE

- <https://www.eclipse.org/downloads/>

The Eclipse Installer 2022-06 R now includes a JRE for macOS, Windows and Linux.

Get **Eclipse IDE 2022-06**
Install your favorite desktop IDE packages.

An Open-Source Strategy

Install Eclipse IDE

- You can download the basic Java SE (first one) for usual, and use Java EE(Enterprise) for the final.
- Eclipse is the tool for coding in the future, so please put the unzipped folder in a suitable place (ex C:\), don't put it in the folder like "Download" to avoid losing it in the future.

Install Eclipse IDE

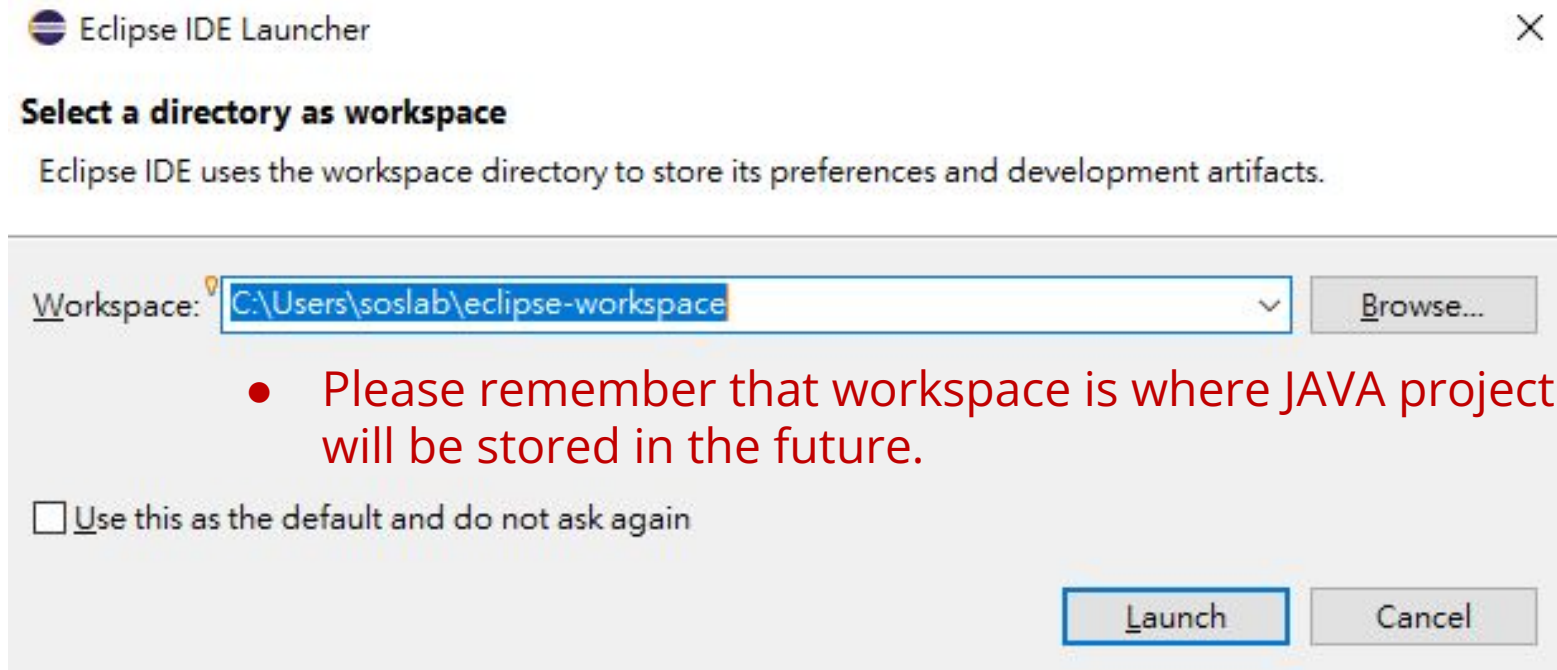

- Recommend adding a new folder (ex: Eclipse) in driver C, and select the folder you just created here.

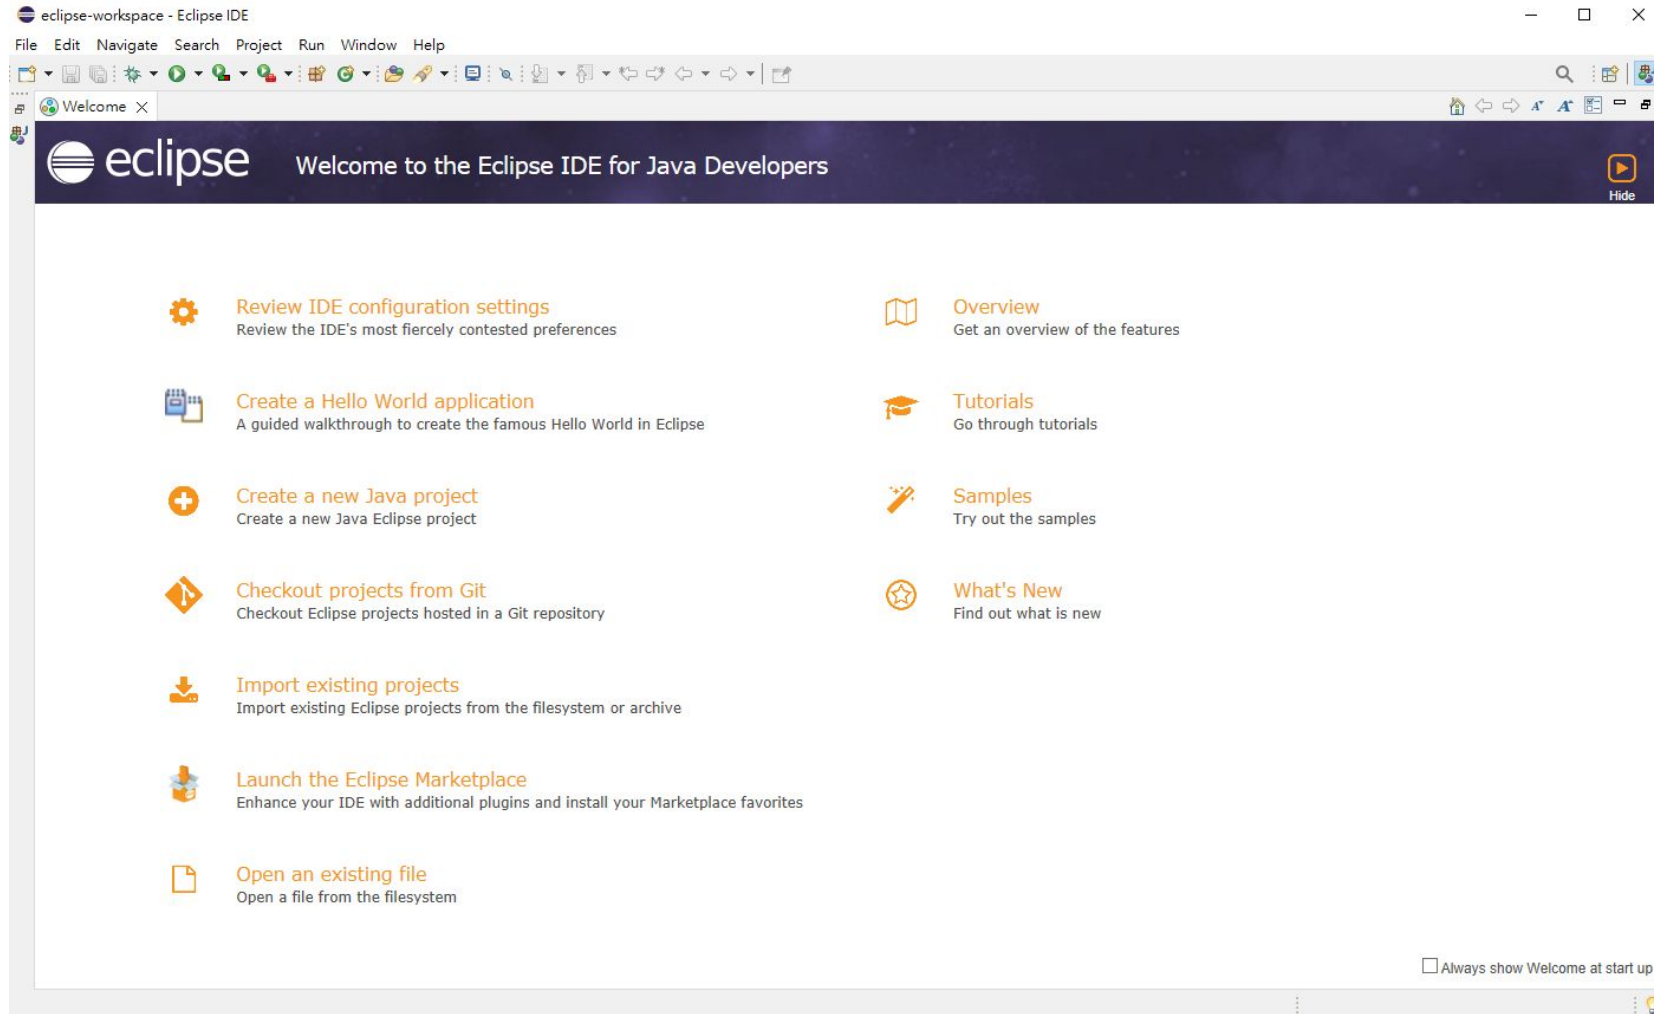

The screenshot shows the Eclipse Installer by Oomph interface. At the top, there is a 'DONATE' button and a close button. Below the header, the title 'Eclipse IDE for Java Developers' is displayed with a 'details' link. A description states: 'The essential tools for any Java developer, including a Java IDE, a Git client, XML Editor, Maven and Gradle integration.' The 'Java 11+ VM' section shows a dropdown menu with the URL 'ps://download.eclipse.org/justj/jres/17/updates/release/latest'. The 'Installation Folder' section has a text input field containing 'C:\Eclipse', which is highlighted with a red rectangle. Below this, there are two checked options: 'create start menu entry' and 'create desktop shortcut'. An arrow points from the 'create desktop shortcut' option to the right. At the bottom, there is a large orange 'INSTALL' button and a 'BACK' button.

- Recommend everyone put a shortcut of Eclipse on the desktop, it will be easier to find in the future!

Open Eclipse IDE

Finish!

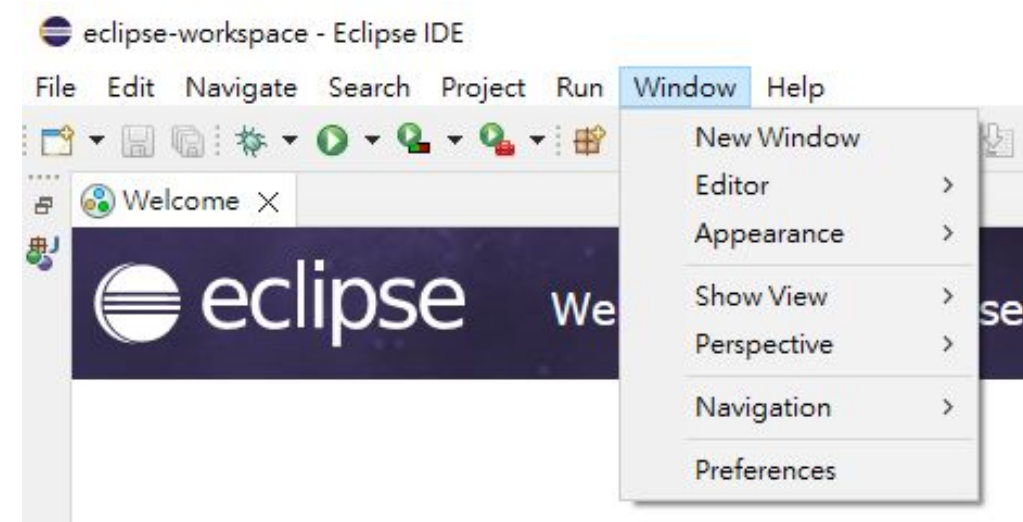

- Students who have used commercial development environments, such as Visual Studio, will feel difficult to adapt when they are new to Eclipse. However, Eclipse is a high-end free development environment; the function of Visual Studio can also be used on Eclipse with a little setting.
- Following will teach everyone set the code auto completion function via “Preference...”

How to open Preferences...

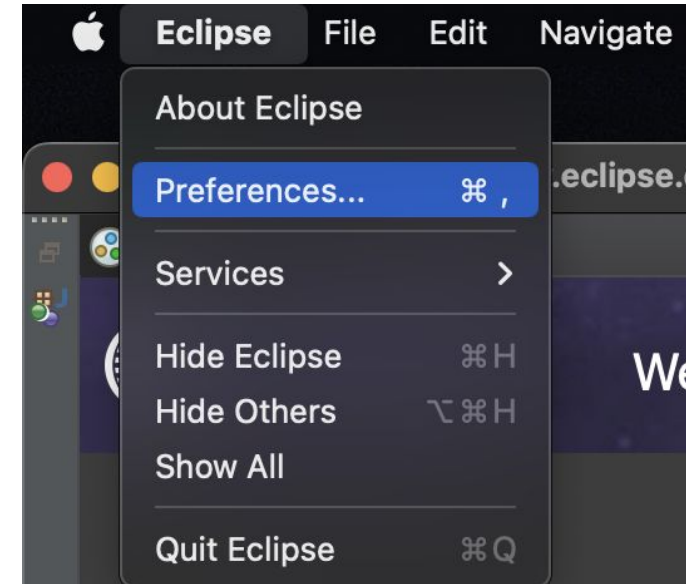

- Windows

The top menu of Eclipse “Window” → “Preferences...”

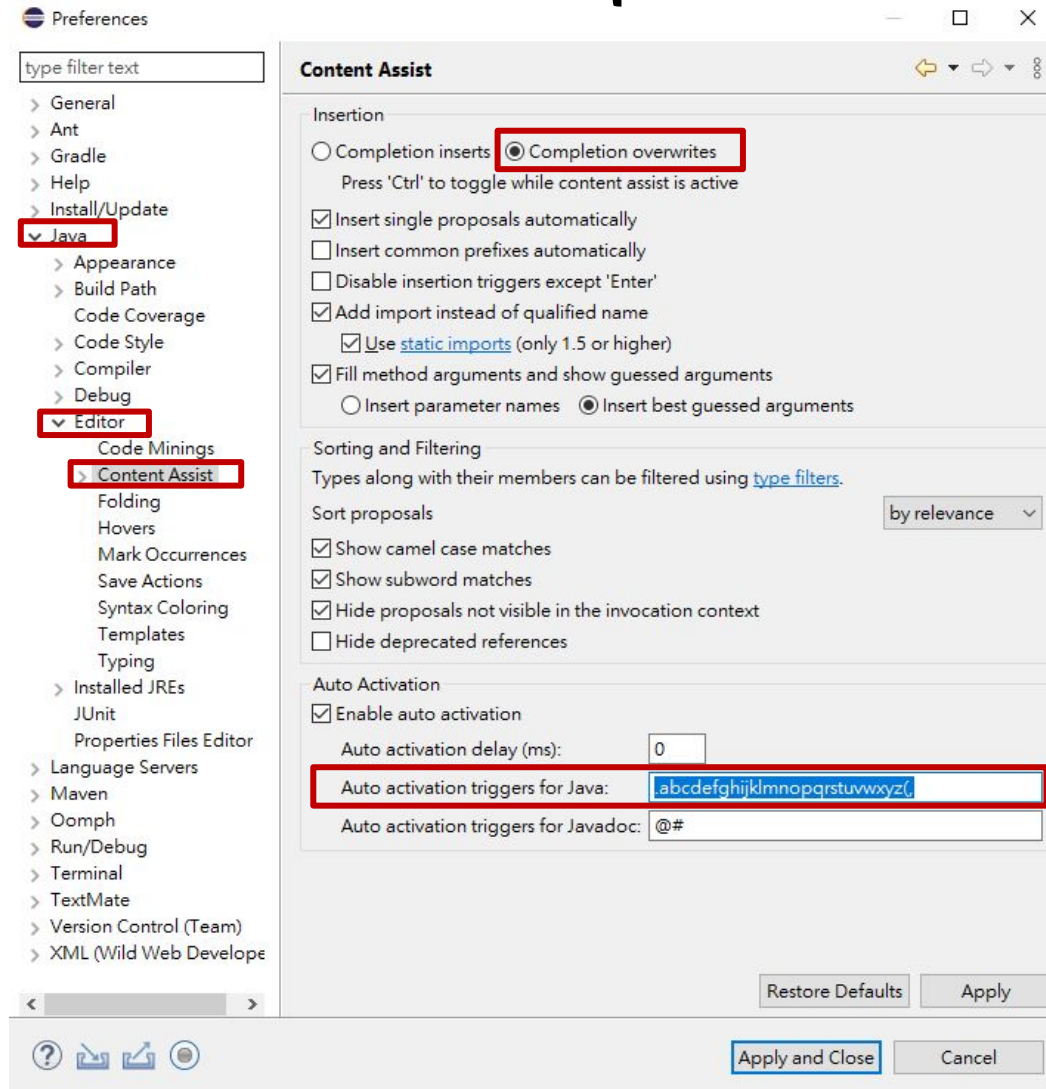

- MAC

The top menu of Eclipse “Eclipse” → “Preferences...”

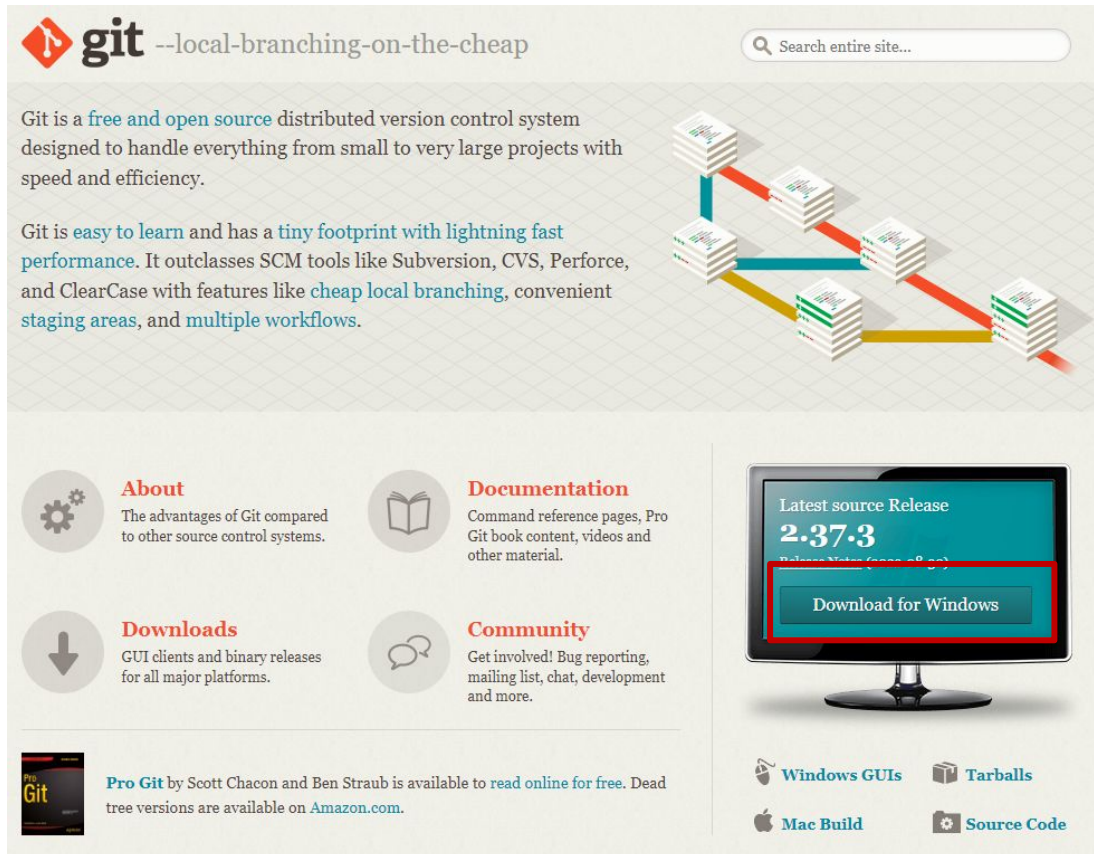

Code auto completion

1. Open "Preferences..."
2. Preferences select "Java" → "Editor" → "Content Assist" on the left side.
3. Choose "Completion overwrites" on the right side.
4. Change "Auto activation triggers for java" value to **.abcdefghijklmnopqrstuvwxyz,**

Install git

- <https://git-scm.com/>

The image shows the Git website homepage. At the top, there's a navigation bar with the Git logo and the tagline "--local-branching-on-the-cheap". Below this, a search bar is visible. The main content area features a large illustration of a branching model with multiple stacks of code blocks connected by lines. To the left of this illustration, there's text describing Git as a free and open source distributed version control system. Below this, there's a section titled "Git is easy to learn" with a list of features. At the bottom, there are four circular icons representing different sections: About, Documentation, Downloads, and Community. To the right of these icons is a monitor displaying the latest source release (2.37.3) and a button to download for Windows. At the very bottom, there are links for Windows GUIs, Tarballs, Mac Build, and Source Code.

git --local-branching-on-the-cheap

Git is a [free and open source](#) distributed version control system designed to handle everything from small to very large projects with speed and efficiency.

Git is [easy to learn](#) and has a [tiny footprint with lightning fast performance](#). It outclasses SCM tools like Subversion, CVS, Perforce, and ClearCase with features like [cheap local branching](#), convenient [staging areas](#), and [multiple workflows](#).

About
The advantages of Git compared to other source control systems.

Documentation
Command reference pages, Pro Git book content, videos and other material.

Downloads
GUI clients and binary releases for all major platforms.

Community
Get involved! Bug reporting, mailing list, chat, development and more.

Latest source Release
2.37.3
Release Notes (2022-08-30)

Download for Mac

Mac GUIs **Tarballs**
Windows Build **Source Code**

Download for macOS

There are several options for installing Git on macOS. Note that any non-source distributions are provided by third parties, and may not be up to date with the latest source release.

Homebrew

Install [homebrew](#) if you don't already have it, then:

```
$ brew install git
```

MacPorts

Install [MacPorts](#) if you don't already have it, then:

```
$ sudo port install git
```

Xcode

Apple ships a binary package of Git with [Xcode](#).

Binary installer

Tim Harper provides an [installer](#) for Git. The latest version is [2.33.0](#), which was released about 1 year ago, on 2021-08-30.

Building from Source

If you prefer to build from source, you can find tarballs [on kernel.org](#). The latest version is [2.37.3](#).

Installing git-gui

If you would like to install [git-gui](#) and [gitk](#), git's commit GUI and interactive history browser, you can do so using [homebrew](#)

```
$ brew install git-gui
```

Check git installation

- Check whether the git installation is successful.
- Type `git --version` in Terminal and enter.

```
Command Prompt
Microsoft Windows [Version 10.0.19044.1889]
(c) Microsoft Corporation. All rights reserved.

C:\Users\soslab>git --version
git version 2.37.3.windows.1
```

```
(base) [redacted]@MacBook ~ % git --version
git version 2.33.0
```

- It will show the version you installed, that means your installation is successful.

Done!
